

Matilda

BIRD BEAK BATTLE!

Investigation Question

How will the structure of a bird's beak restrict the bird's diet?

Prediction

I think the pelican will be able to hold the most food because it has a long sharp beak. I think the finch will eat seeds or insects and eat the least because its beak is really small.

Materials

- | | |
|---|---|
| <ul style="list-style-type: none">1 cup each (the bird's stomach)6 tweezers (finch beak)6 tongs (duck beak)6 pliers (cockatoo beak)6 ladles (pelican beak)6 pegs (kookaburra beak) | <ul style="list-style-type: none">1 bowl of small seeds1 bowl of pasta shells1 bowl of gummy worms1 bowl of spinach in water1 bowl of apple slices in waterA clock or stopwatch for timing |
|---|---|

Variables

What will we be changing?	What will we be observing?	What will we keep the same?
The bird beak utensils are the only item that will change in each test.	We will be observing how different bird beaks are at "eating" a variety of foods.	The time for testing each beak, the bird food, the hand used to control the beak and the cups.
